This site is intended to be a help to Marinas Harbour GUI new users, and to those that are migrating from another GUI

like Minigui or HMG.

Here you can find samples and ideas about how to do some tasks using multi-platform gui.

The principal operating system 's are Windows and Linux , but Marinas runs too into MacOS and Haiku for example.

My skills and samples will be pointed mostly to Linux Ubuntu and eventually to windows, but the whole idea is that the code

which runs in Linux, runs in Windows too, solving specific OS differences, of course.

I invite you to Join our Yahoo Groups to ask the questions that you will need.

Este Sitio Pretende ser una ayuda para los nuevos usuarios de MArinas-Gui , y aquellos que estan migrando de alguna otra GUI

como Minigui o HMG.

Aqui ud. puede encontrar ejemplos e ideas sobre como realizar ciertas tareas usando una libreria grafica multiplataforma.

Los principales sistemas operativos utilizados son Windows y Linux , pero Marinas corre sobre MacOS y Haiku por ejemplo.

Los ejemplos estaran mayormente orientados a Linux Ubuntu y eventualmente para windows , pero la idea es que el codigo

que funciona en Linux , tambien deberia funcionar en windows , salvando las diferencias especificas del sistema operativo, por supuesto.

Lo invito a unirse a nuestros Grupos Yahoo y realizar las preguntas que considere necesarias.
